

## FISCAL YEAR 2005 – 2006 GRANT RECIPIENTS

*These grant programs are made possible by funding from the U.S. Department of Energy's State Energy Program. (SEP)*

### **PUBLIC FACILITY IMPROVEMENT GRANT (PFI)**

*The **Public Facility Improvement Grant Program** offers grants to public facilities [schools, local government, libraries] for energy efficiency projects such as:*

*Lighting Retrofits | HVAC Upgrades | Green Building Improvements*

*These projects serve as demonstrations of energy-efficient technologies that can be deployed across Indiana.*

1. **Lake Central School Corporation** – Lake County - \$9,973.00: The Grimmer Middle School in Schereville is receiving a PFI grant for a lighting project. By switching to electronic ballast and converting to newer T-8 lamps this facility grant will see \$1,683.00 per year in energy savings.
2. **Logansport Hospital** – Cass County - \$8,181.00: The Logansport Memorial Hospital is receiving a PFI grant to upgrade lighting. In some corridors lights are on 24 hours a day, 7 days a week. New lights will be installed and placed 12 feet apart. This measure will save the hospital approximately \$2,693 or 48% on its yearly lighting bill.
3. **City of Logansport** –Cass County - \$10,000: The City of Logansport is receiving a PFI grant for making energy efficient upgrades to the historic Railroad Depot. The project includes replacing windows, adding insulation in sidewalls and attics, and upgrading the aging furnace with a new more energy efficient one.
4. **Delphi Public Library** –Carroll County- \$10,000: The Delphi Public Library is receiving a PFI grant to add more energy efficient lights, as well as occupancy sensors and attic insulation. These changes will save the library \$2,256 a year or roughly 19% of its annual energy bill.
5. **City of LaPorte** – LaPorte County - \$10,000: The City of LaPorte is receiving a PFI grant to install new and more efficient technologies at its waste facility. By using two Variable Speed Drives, the City will save \$6,450 a year, and reduce its energy consumption at the facility by 50%. The pump motors, which run 24 hours a day, 7 days a week, will not have to operate at 100% when it is more efficient to run at 50%.
6. **Dunn Memorial Hospital** – Lawrence County - \$1,846.00: Dunn Memorial Hospital is receiving a PFI grant to upgrade its hot water piping system. The hospital will install custom insulation for valves, pumps, unions, and blind flanges which are otherwise left bare and uninsulated. This type of insulation will capture heat which is lost in the hot water piping systems.
